

Build Better Parking.

Prefabricated Systems Deliver Best Value for Owners.

Five months ahead of schedule & 30M under budget paid for the 1megawatt roof solar system.

Raising Expectations

When you choose a Clark Pacific Parking Solution, you are choosing a solution with reduced risk as well as budget and schedule certainty.

Leveraging our 100+ in-house engineers and subject matter experts, we help bring your project to life sooner. Our pre-engineered products and innovations will be customized to meet your project's unique requirements.

Our experience in parking structure design and delivery ranges from the straightforward to the most complex.

We collaborate with your team throughout the design-manufacture-build process and help you deliver a successful project no matter its size or complexity.

True Owner Value:

- Fastest time to Market
- Reduced Site Impacts
- Budget Certainty
- Precision Quality
- Resilient Structures

Hoover Pavilion Parking Structure
Palo Alto, CA

Wide open parking levels enhancing level of service as well as passive security.

UC Davis Health Services
Parking Structure III
Sacramento, CA

Integrated high-end durable finishes into the structural frame – All-in-One.

Our Parking Experience Speaks Volumes

Benefits of Clark Pacific Parking Structures

Speed

No parking structure is put into service more quickly than a Clark Pacific solution. Our pre-engineered approach and manufactured solutions mean significant time savings over any conventional approach by 30 % - 40%.

Reduced Site Impacts

No approach to construction offers owners a lower impact to the jobsite, campus, or neighborhood than Clark Pacific's. Our approach removes thousands of man days from the project jobsite, significantly reducing owner impacts and risk.

Aesthetics

Clark Pacific's solutions offer a wide variety of aesthetic options for integrated architectural finishes. From integral color and textures to integrated brick, stone, or tile, no other system offers more flexibility for owners and their design teams.

Quality & Performance

Manufactured quality guarantees better performance and enhanced durable finishes than equivalent site-built structures. Clark Pacific offers the Precast Hybrid Moment Frame for lateral resistance which gives owners an added level of asset protection due to its unique ability to self-right the structure after an earthquake, thus allowing for immediate reoccupancy after an event. We deliver durability and resilience for your project.

Adaptable & Flexible

Clark Pacific's componentized parking solutions are adaptable and flexible. Used for parking today, our systems are ideally suited for adaptive reuse in the future.

All-in-one where finishes are integrated into structural systems. Enhanced performance and resiliency is provided through the use of the Precast Hybrid Moment Frame.

Clark Pacific Approach

Conventional On-Site Construction

UC Davis Medical Center
Parking Structure III
Sacramento, CA
Stalls: 1,200

Mary Avenue
Garage
Sunnyvale, CA
Stalls: 145

Target

Stalls: 450

No matter the size or complexity, we can help deliver a successful parking project with budget and schedule certainty.

About Clark Pacific

Clark Pacific is a leading manufacturer of prefabricated building systems. We are transforming design and construction by delivering high quality, cost effective buildings with less risk. Clark Pacific paves the way for prefabrication as a smarter, safer and more efficient way to bring great designs to life. Clark Pacific collaborates with construction owners and design-build teams to develop and deliver prefabricated building systems for commercial and institutional projects of any size and complexity.

Build different. Achieve more.
